

Water & Waste Water

When it comes to Water and Waste Water Treatment plants, do the job once and do it right. The Collins Companies can help you choose the right product for the application.

Red Valve

Red Valve provides a Total System Solution for water and wastewater treatment plants, providing products for each phase of treatment - collection, separation, aeration, treatment and final discharge. One source for all of your slurry handling needs including on/off and control valves, check valves, pressure measurement, expansion compensation, air diffusers and effluent diffusers.

Limitorque

Limitorque's Multi-position MX electric actuator provides lower cost of ownership and enhanced operational features for applications where it is desirable to have the actuator stop at one or two pre-determined, mid positions. A feature not available with typical actuator control systems.

WIKAI®

Wika measuring instruments are used in diverse applications for municipal and industrial wastewater treatment, e.g. overflow, rain retention, settling ponds, raking systems, filter presses, digester towers, and compressed air supply. WIKA offers a wide standard range of mechanical and electronic pressure and temperature instruments, including submersible pressure transmitters, to meet the demands of your process.
